Clamp Meter Test Leads Kit

Electrical

When you need test tools for equipment installation, maintenance, and repair work, Extech meters and testers are up to the task. Use our tools to track down electrical faults and power quality problems, perform predictive vibration analysis, diagnose motors and controllers, and detect emerging issues before damage occurs.

Manufacturing

Improperly functioning equipment, if not detected soon enough, can lead to loss of money or potential injury. Extech testers and meters can help you solve tough problems as well as day-to-day maintenance challenges that include inspection of motors, pumps, conveyors, and electrical connections and components, new equipment installations and repairs by contractors, and even the plant itself including roofing, heating and cooling systems, and building structures.

Multimeters

Electronics

When you're testing electrical components and repairing circuit boards, you need reliable tools that will provide the accuracy you need to get the job done. Extech has everything for the professional benchtop technician including clamp meters, LCR meters, power supplies, multimeters, and more!

Oscilloscopes

Power Supplies

Plant Maintenance

In plant maintenance, you're constantly checking for proper grounding, overheating issues, potential equipment failures, and other diagnostic tests. Extech has valuable tools to help you detect problems, prevent unscheduled downtime, guide needed corrective action, and increase plant safety. Extech testers and meters can alert you to problems and validate successful corrective actions. Technicians rely on Extech multimeters, clamp meters, and thermometers for monitoring electrical and temperature factors, and tachometers for rotating and linear conveyance equipment.

Lab & Water Quality

When it comes to water quality and compliance to clean industrial standards, you want fast-responding tools that can deliver accurate and repeatable readings. Extech offers must-have water quality testing tools for wastewater treatment facilities, water treatment, industrial systems (boiler water systems, cooling towers, cooling systems, closed loops), alternative farming (hydro/aerponics), fish farming, lab testing, pool maintenance, R&D, and more.

HVAC/R

If you're trying to eliminate energy loss due to inadequate HVAC systems, radiant heating, or poor air flow, Extech has the instruments to help you optimize ventilation settings, balance HVAC systems, and make improvements to achieve maximum cost savings. With clamp meters designed specifically for HVAC, as well as thermometers and moisture meters, Extech offers valuable tools for diagnosing energy loss and validating corrections.
